## MEASURES OF DISPERSION

## Measures of Central Tendency and Dispersion

## Measure of Central Tendency:

1) Mathematical Average:
a) Arithmetic mean (A.M.)
b) Geometric mean (G.M.)
c) Harmonic mean (H.M.)
2) Averages of Position:
a) Median
b) Mode

## Arithmetic Mean:

(1) Simple arithmetic mean in individual series
(i) Direct method: If the series in this case be $x_{1}, x_{2}, x_{3}, \ldots \ldots, x_{n}$; then the arithmetic mean $\bar{x}$ is given by

$$
\begin{aligned}
& \bar{x}=\frac{\text { Sum of the series }}{\text { Number of terms }} \\
& \text { i.e., } \bar{x}=\frac{x_{1}+x_{2}+x_{3}+\ldots+x_{n}}{n}=\frac{1}{n} \sum_{i=1}^{n} x_{i}
\end{aligned}
$$

(2) Simple arithmetic mean in continuous series If the terms of the given series be $x_{1}, x_{2}, \ldots, x_{n}$ and the corresponding frequencies be $f_{1}, f_{2}, \ldots . f_{n}$, then the arithmetic mean $\bar{x}$ is given by,

$$
\bar{x}=\frac{f_{1} x_{1}+f_{2} x_{2}+\ldots+f_{n} x_{n}}{f_{1}+f_{2}+\ldots+f_{n}}=\frac{\sum_{i=1}^{n} f_{i} x_{i}}{\sum_{i=1}^{n} f_{i}}
$$

Continuous Series: If the series is continuous then $\mathrm{x}_{\mathrm{ii}}$ 's are to be replaced by $\mathrm{m}_{\mathrm{i}}$ 's where $\mathrm{m}_{\mathrm{i}}$ 's are the mid values of the class intervals.

Mean of the Composite Series: If $\bar{x}_{i}(i=1,2 \ldots, k)$ are the means of $k$-component series of sizes $n_{i}(i=1,2, \ldots, k)$ respectively, then the mean $\bar{x}$ of the composite series obtained on combining the
component series is given by the formula $\bar{x}=\frac{n_{1} \bar{x}_{1}+n_{2} \bar{x}_{2}+\ldots .+n_{k} \bar{x}_{k}}{n_{1}+n_{2}+\ldots .+n_{k}}=\frac{\sum_{i=1}^{n} n_{i} \bar{x}_{i}}{\sum_{i=1}^{n} n_{i}}$.
Geometric Mean: If $x_{1}, x_{2}, x_{3}, \ldots \ldots, x_{n}$ are $n$ values of a variate $x$, none of them being zero, then geometric mean (G.M.) is given by G.M. $=\left(x_{1}, x_{2}, x_{3}, \ldots, x_{n}\right)^{1 / n}$

In case of frequency distribution, G.M. of $n$ values $x_{1}, x_{2}, \ldots, x_{n}$ of a variate $x$ occurring with frequency $f_{1}, f_{2}, \ldots, f_{n}$ is given by G.M. $=\left(X_{1}^{f_{1}} \cdot X_{2}^{f_{2}} \ldots . . X_{n}^{f_{n}}\right)^{1 / N}$, where $N=f_{1}+f_{2}+\ldots .+f_{n}$.

Continuous Series: If the series is continuous then $\mathrm{x}_{\mathrm{ii}}$ 's are to be replaced by $\mathrm{m}_{\mathrm{i}}$ 's where $\mathrm{m}_{\mathrm{i}}$ 's are the mid values of the class intervals.

Harmonic Mean: The harmonic mean of $n$ items $x_{1}, x_{2}, \ldots \ldots, x_{n}$ is defined as н.м. $=\frac{n}{\frac{1}{x_{1}}+\frac{1}{x_{2}}+\ldots .+\frac{1}{x_{n}}}$. If the frequency distribution is $f_{1}, f_{2}, f_{3}, \ldots \ldots, f_{n}$ respectively, then н... $=\frac{f_{1}+f_{2}+f_{3}+\ldots .+f_{n}}{\left(\frac{f_{1}}{x_{1}}+\frac{f_{2}}{x_{2}}+\ldots .+\frac{f_{n}}{x_{n}}\right)}$.

Median: The median is the central value of the set of observations provided all the observations are arranged in the ascending or descending orders. It is generally used, when effect of extreme items is to be kept out.
(1) Calculation of median
(i) Individual series: If the data is raw, arrange in ascending or descending order. Let $n$ be the number of observations.

If $n$ is odd, Median $=$ value of $\left(\frac{n+1}{2}\right)^{\text {th }}$ item.
If $n$ is even, Median $=\frac{1}{2}\left[\right.$ value of $\left(\frac{n}{2}\right)^{\text {th }}{ }^{\text {item }}+$ value of $\left.\left(\frac{n}{2}+1\right)^{\text {th }} \mathrm{item}\right]$
(ii) Discrete series: In this case, we first find the cumulative frequencies of the variables arranged in ascending or descending order and the median is given by

Median $=\left(\frac{n+1}{2}\right)^{\text {lh }}$ observation, where $n$ is the cumulative frequency.
(iii) For grouped or continuous distributions: In this case, following formula can be used.
(a) For series in ascending order, Median $=l+\frac{\left(\frac{N}{2}-C\right)}{f} \times i$

Where $l=$ Lower limit of the median class
$f=$ Frequency of the median class
$N=$ The sum of all frequencies
$i=$ The width of the median class
$C=$ The cumulative frequency of the class preceding to median class.
(b) For series in descending order

Median $=u-\left(\frac{\frac{N}{2}-C}{f}\right) \times i$, where $u=$ upper limit of the median class, $N=\sum_{i=1}^{n} f_{i}$.
As median divides a distribution into two equal parts, similarly the quartiles, quintiles, deciles and percentiles divide the distribution respectively into $4,5,10$ and 100 equal parts. The $j^{\text {th }}$ quartile is given by $Q_{j}=l+\left(\frac{j \frac{N}{4}-C}{f}\right) i ; j=1,2,3 . Q_{1}$ is the lower quartile, $Q_{2}$ is the median and $Q_{3}$ is called the upper quartile.
(2) Lower quartile
(i) Discrete series: $Q_{1}=\operatorname{size}$ of $\left(\frac{n+1}{4}\right)^{\text {th }}$ item
(ii) Continuous series : $Q_{1}=l+\frac{\left(\frac{N}{4}-C\right)}{f} \times i$
(3) Upper quartile
(i) Discrete series : $Q_{3}=\operatorname{size}$ of $\left[\frac{3(n+1)}{4}\right]^{\text {th }}$ item
(ii) Continuous series : $Q_{3}=l+\frac{\left(\frac{3 N}{4}-C\right)}{f} \times i$

Mode: The mode or model value of a distribution is that value of the variable for which the frequency is maximum. For continuous series, mode is calculated as,

Mode $=l_{1}+\left[\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right] \times i$
Where, $l_{1}=$ The lower limit of the model class
$f_{1}=$ The frequency of the model class
$f_{0}=$ The frequency of the class preceding the model class
$f_{2}=$ The frequency of the class succeeding the model class
$i=$ The size of the model class.

Empirical relation : Mean - Mode $=3($ Mean - Median $) \Rightarrow$ Mode $=3$ Median -2 Mean.

Measure of dispersion:The degree to which numerical data tend to spread about an average value is called the dispersion of the data. The four measure of dispersion are
(1) Range
(2) Mean deviation
(3) Standard deviation
(4) Square deviation
(1) Range : It is the difference between the values of extreme items in a series. Range $=X_{\max }-X_{\min }$

The coefficient of range (scatter) $=\frac{x_{\max }-x_{\min }}{x_{\max }+x_{\min }}$.
Range is not the measure of central tendency. Range is widely used in statistical series relating to quality control in production.

Range is commonly used measures of dispersion in case of changes in interest rates, exchange rate, share prices and like statistical information. It helps us to determine changes in the qualities of the goods produced in factories.

Quartile deviation or semi inter-quartile range: It is one-half of the difference between the third quartile and first quartile i.e., Q.D. $=\frac{Q_{3}-Q_{1}}{2}$ and coefficient of quartile deviation $=\frac{Q_{3}-Q_{1}}{Q_{3}+Q_{1}}$, where $Q_{3}$ is the third or upper quartile and $Q_{1}$ is the lowest or first quartile.
(2) Mean Deviation: The arithmetic average of the deviations (all taking positive) from the mean, median or mode is known as mean deviation.

Mean deviation is used for calculating dispersion of the series relating to economic and social inequalities. Dispersion in the distribution of income and wealth is measured in term of mean deviation.
(i) Mean deviation from ungrouped data (or individual series) Mean deviation $=\frac{\Sigma|x-M|}{n}$,
where $|x-M|$ means the modulus of the deviation of the variate from the mean (mean, median or mode) and $n$ is the number of terms.
(ii) Mean deviation from continuous series: Here first of all we find the mean from which deviation is to be taken. Then we find the deviation $d M=|x-M|$ of each variate from the mean $M$ so obtained.

Next we multiply these deviations by the corresponding frequency and find the product $f . d M$ and then the sum $\Sigma f d M$ of these products.

Lastly we use the formula, mean deviation $=\frac{\sum f|x-M|}{n}=\frac{\sum f d M}{n}$, where $n=\Sigma f$.
(3) Standard Deviation: Standard deviation (or S.D.) is the square root of the arithmetic mean of the square of deviations of various values from their arithmetic mean and is generally denoted by $\sigma$ read as sigma. It is used in statistical analysis.
(i) Coefficient of standard deviation: To compare the dispersion of two frequency distributions the relative measure of standard deviation is computed which is known as coefficient of standard deviation and is given by

Coefficient of S.D. $=\frac{\sigma}{\bar{x}}$, where $\bar{x}$ is the A.M.
(ii) Standard deviation from individual series
$\sigma=\sqrt{\frac{\sum(x-\bar{x})^{2}}{N}}$
where, $\bar{x}=$ The arithmetic mean of series
$N=$ The total frequency.
(iii) Standard deviation from continuous series
$\sigma=\sqrt{\frac{\sum f_{i}\left(x_{i}-\bar{x}\right)^{2}}{N}}$
where, $\bar{x}=$ Arithmetic mean of series
$x_{i}=$ Mid value of the class
$f_{i}=$ Frequency of the corresponding $x_{i}$
$N=\Sigma f=$ The total frequency

## Short cut Method:

(i) $\sigma=\sqrt{\frac{\sum f d^{2}}{N}-\left(\frac{\sum f d}{N}\right)^{2}} \quad$ (ii) $\sigma=\sqrt{\frac{\sum d^{2}}{N}-\left(\frac{\sum d}{N}\right)^{2}}$
where, $d=x-A=$ Deviation from the assumed mean $A$
$f=$ Frequency of the item
$N=\Sigma f=$ Sum of frequencies

## (4) Square Deviation:

(i) Root mean square deviation $S=\sqrt{\frac{1}{N} \sum_{i=1}^{n} f_{i}\left(x_{i}-A\right)^{2}}$,
where $A$ is any arbitrary number and $S$ is called mean square deviation.
(ii) Relation between S.D. and root mean square deviation : If $\sigma$ be the standard deviation and $S$ be the root mean square deviation.

Then, $s^{2}=\sigma^{2}+d^{2}$.
Obviously, $s^{2}$ will be least when $d=0$ i.e., $\bar{x}=A$
Hence, mean square deviation and consequently root mean square deviation is least, if the deviations are taken from the mean.

Variance: The square of standard deviation is called the variance. Coefficient of standard deviation and variance : The coefficient of standard deviation is the ratio of the S.D. to A.M. i.e., $\frac{\sigma}{x}$.

Coefficient of variance $=$ coefficient of S.D. $\times 100=\frac{\sigma}{\bar{x}} \times 100$.
Variance of the combined series : If $n_{1}, n_{2}$ are the sizes, $\bar{x}_{1}, \bar{x}_{2}$ the means and $\sigma_{1}, \sigma_{2}$ the standard deviation of two series, then $\sigma^{2}=\frac{1}{n_{1}+n_{2}}\left[n_{1}\left(\sigma_{1}^{2}+d_{1}^{2}\right)+n_{2}\left(\sigma_{2}^{2}+d_{2}^{2}\right)\right]$,

Where $d_{1}=\bar{x}_{1}-\bar{x}, d_{2}=\bar{x}_{2}-\bar{x}$ and $\bar{x}=\frac{n_{1} \bar{x}_{1}+n_{2} \bar{x}_{2}}{n_{1}+n_{2}}$

## Very Short Answer Questions

1. Find the mean deviation about the mean for the following data:
i) $38,70,48,40,42,55,63,46,54,44$
ii) $3,6,10,4,9,10$

Sol.i) Mean $\overline{\mathrm{x}}=\frac{38+70+48+40+42+55+63+46+54+44}{10}$

$$
=\frac{500}{10}=50
$$

The absolute values of mean deviations are $\left|x_{i}-\bar{x}\right|=12,20,2,10,8,5,13,4,4,6$.
$\therefore$ Mean deviation about the Mean $=\frac{\sum_{\mathrm{i}=1}^{10}\left|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right|}{10}$

$$
\begin{aligned}
& =\frac{12+20+2+10+8+5+13+4+4+6}{10} \\
& =\frac{84}{10}=8.4
\end{aligned}
$$

ii) Mean $(\bar{x})=\frac{\sum_{i=1}^{6} x_{i}}{n}$
$\therefore \overline{\mathrm{x}}=\frac{3+6+10+4+9+10}{6}=\frac{42}{6}=7$
The absolute values of the deviations are $\left|x_{i}-\bar{x}\right|=4,1,3,3,2,3$
Mean deviation about the Mean $=\frac{\sum_{i=1}^{6}\left|x_{i}-\bar{x}\right|}{6}$

$$
=\frac{4+1+3+3+2+3}{6}=\frac{16}{6}=2.6666 \simeq 2.67
$$

2. Find the mean deviation about the median for the following data.
i) $13,17,16,11,13,10,16,11,18,12,17$
ii) $4,6,9,3,10,13,2$

Sol. Given data in the ascending order :10, 11, 11, 12, 13, 13, 16, 16, 17, 17, 18
Mean (M) of these 11 observations is 13 .
The absolute values of deviations are $\left|\mathrm{x}_{\mathrm{i}}-\mathrm{M}\right|=3,2,2,1,0,0,3,3,4,4,5$
$\therefore$ Mean deviation about Median $=\frac{\sum_{i=1}^{11}\left|x_{i}-M\right|}{n}=\frac{3+2+2+1+0+0+3+3+4+4+5}{11}$

$$
=\frac{27}{11}=2.45
$$

## ii) $4,6,9,3,10,13,2$

Expressing the given data in the ascending order, we get $2,3,4,6,9,10,13$.
Median (M) of given data $=6$
The absolute values of the deviations are $\left|x_{i}-\bar{x}\right|=4,3,2,0,3,4,7$
$\therefore$ Mean Deviation about Median $=\frac{\sum_{i=1}^{7}\left|x_{i}-M\right|}{n}=\frac{4+3+2+0+3+4+7}{7}=\frac{23}{7}=3.29$.
3. Find the mean deviation about the mean for the following distribution.
i)

| $x_{i}$ | 10 | 11 | 12 | 13 |
| :---: | :---: | :---: | :---: | :---: |
| $f_{i}$ | 3 | 12 | 18 | 12 |

ii)

| $x_{i}$ | 10 | 30 | 50 | 70 | 90 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $f_{i}$ | 4 | 24 | 28 | 16 | 8 |

Sol. i)

| $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ | $\left\|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right\|$ | $\mathrm{f}_{\mathrm{i}}\left\|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right\|$ |
| :---: | :---: | :---: | :---: | :---: |
| 10 | 3 | 30 | 1.87 | 5.61 |
| 11 | 12 | 132 | 0.87 | 10.44 |
| 12 | 18 | 216 | 0.13 | 2.24 |
| 13 | 12 | 156 | 1.13 | 13.56 |

$\therefore$ Mean $(\overline{\mathrm{x}})=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\mathrm{N}}=\frac{534}{45}=11.87$
$\therefore$ Mean Deviation about the Mean $=\frac{\sum_{i=1}^{4} f_{i}\left|x_{i}-\bar{x}\right|}{N}=\frac{31.95}{45}=0.71$.
ii)

| $x_{i}$ | $f_{i}$ | $f_{i} x_{i}$ | $\left\|x_{i}-\bar{x}\right\|$ | $f_{i}\left\|x_{i}-\bar{x}\right\|$ |
| :---: | :---: | :---: | :---: | :---: |
| 10 | 4 | 40 | 40 | 160 |
| 30 | 24 | 720 | 20 | 480 |
| 50 | 28 | 1400 | 0 | 0 |
| 70 | 16 | 1120 | 20 | 320 |
| 90 | 8 | 720 | 40 | 320 |

$\therefore$ Mean $(\overline{\mathrm{x}})=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\mathrm{N}}=\frac{4000}{80}=50$
$\therefore$ Mean Deviation about the Mean $=\frac{\sum_{i=1}^{5} f_{i}\left|x_{i}-\bar{x}\right|}{N}=\frac{1280}{80}=16$.
4. Find the mean deviation about the median for following frequency distribution.

| $\mathrm{x}_{\mathrm{i}}$ | 5 | 7 | 9 | 10 | 12 | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{f}_{\mathbf{i}}$ | 8 | 6 | 2 | 2 | 2 | 6 |

Sol.Writing the observations in ascending order.

| $x_{i}$ | $f_{i}$ | Cumulative <br> frequency <br> CFF) | $\left\|x_{i}-M\right\|$ | $f_{i}\left\|x_{i}-M\right\|$ |
| :---: | :---: | :---: | :---: | :---: |
| 5 | 8 | 8 | 2 | 16 |
| $7 \rightarrow M$ | 6 | $14>N / 2$ | 0 | 0 |
| 9 | 2 | 16 | 2 | 4 |
| 10 | 2 | 18 | 3 | 6 |
| 12 | 2 | 20 | 5 | 10 |
| 15 | 6 | 26 | 8 | 48 |

Hence $N=26$ and $\frac{N}{2}=13$
$\operatorname{Median}(M)=7$
Mean Deviation about Median $=\frac{\sum_{i=1}^{6}\left|x_{i}-M\right|}{n}=\frac{87}{26}=3.23$.

## Short Answer Questions

## 1. Find the mean deviation about the median for the following continuous distribution.

i)

| Marks obtained | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| No.of boys | 6 | 8 | 14 | 16 | 4 | 2 |

ii)

| Class interval | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 5 | 8 | 7 | 12 | 28 | 20 | 10 | 10 |

## Sol.i)

| Class <br> interval | frequency <br> $\mathrm{f}_{\mathrm{i}}$ | C.F. | Midpoint $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{x}_{\mathrm{i}}-\mathrm{M} \mid$ | $\mathrm{f}_{\mathrm{i}}\left\|\mathrm{x}_{\mathrm{i}}-\mathrm{M}\right\|$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0-10 | 6 | 6 | 5 | 20.86 | 137.16 |
| 10-20 | 8 | 14 | 15 | 12.86 | 102.88 |
| 20-30 | 14 | 28 | 25 | 2.86 | 40.04 |
| 30-40 | 16 | 44 | 35 | 7.14 | 114.24 |
| 40-50 | 4 | 48 | 45 | 17.14 | 68.56 |
| 50-60 | - 2 | 50 | 55 | 27.14 | 54.28 |
|  | $\mathrm{N}=50$ |  |  |  | 517.16 |

Hence $L=20, \frac{N}{2}=25, f_{1}=14, f=14, h=10$
$\operatorname{Median}(M)=L+\left[\frac{\left(\frac{N}{2}-f_{i}\right)}{f}\right] h=20+\frac{25-14}{14} \times 10=20+\frac{110}{14}=20+7.86=27.86$
$\therefore$ Mean Deviation about Median $=\frac{\sum_{\mathrm{i}=1}^{6} \mathrm{f}_{\mathrm{i}}\left|\mathrm{x}_{\mathrm{i}}-\mathrm{M}\right|}{\mathrm{N}}=\frac{517.16}{50}=10.34$.
ii)

| Class <br> interval | frequenc <br> $\mathrm{y}_{\mathrm{i}}$ | C.F. | Midpoint <br> $\mathbf{x}_{\mathrm{i}}$ | $\left\|\mathbf{x}_{\mathrm{i}}-\mathbf{M}\right\|$ | $\mathbf{f}_{\mathrm{i}}\left\|\mathbf{x}_{\mathrm{i}}-\mathbf{M}\right\|$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0-10$ | 5 | 5 | 5 | 41.43 | 207.15 |
| $10-20$ | 8 | 13 | 15 | 31.43 | 251.44 |
| $20-30$ | 7 | 20 | 25 | 21.43 | 150.01 |
| $30-40$ | 12 | 32 | 35 | 11.43 | 137.16 |
| $40-50$ | 28 | 60 | 45 | 1.43 | 40.04 |
| $50-60$ | 20 | 80 | 55 | 8.57 | 171.40 |
| $60-70$ | 10 | 90 | 65 | 18.57 | 185.70 |
| $70-80$ | 10 | 100 | 75 | 28.57 | 285.70 |

Here $\mathrm{N}=100, \frac{\mathrm{~N}}{2}=50, \mathrm{~L}=40, \mathrm{f}_{1}=32, \mathrm{f}=28, \mathrm{~h}=10$
$\operatorname{Median}(M)=L+\left[\frac{\left(\frac{N}{2}-f_{i}\right)}{f}\right] h=40+\frac{50-32}{28} \times 10=40+\frac{180}{28}=40+6.43=46.43$
$\therefore$ Mean Deviation about Median $=\frac{\sum_{\mathrm{i}=1}^{8} \mathrm{f}_{\mathrm{i}}\left|\mathrm{x}_{\mathrm{i}}-\mathrm{M}\right|}{\mathrm{N}}=\frac{1428.6}{100}=14.29$.
2. Find the mean deviation about the mean for the following continuous distribution.

| Height <br> (in cms) | $95-105$ | $105-115$ | $115-125$ | $125-135$ | $135-145$ | $145-155$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> boys | 9 | 13 | 26 | 30 | 12 | 10 |

Sol.

| Height <br> (C.I) | No.of <br> boys ( $\left.\mathbf{f}_{\mathrm{i}}\right)$ | Midpoint $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{d}_{\mathrm{i}}=\frac{\mathrm{x}_{\mathrm{i}}-\mathrm{A}}{\mathrm{h}}$ | $\mathbf{f}_{\mathrm{i}} \mathbf{d}_{\mathrm{i}}$ | $\left\|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right\|$ | $\mathbf{f}_{\mathrm{i}}\left\|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right\|$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| $95-105$ | 9 | 100 | -3 | -27 | 25.3 | 227.7 |
| $105-115$ | 13 | 110 | -2 | -26 | 15.3 | 198.9 |
| $115-125$ | 26 | 120 | -1 | -26 | 5.3 | 137.8 |
| $125-135$ | 30 | $130 \rightarrow(\mathrm{~A})$ | 0 | 0 | 4.7 | 141.0 |
| $135-145$ | 12 | 140 | 1 | 12 | 14.7 | 176.4 |
| $145-155$ | 10 | 150 | 2 | 20 | 24.7 | 247.0 |

$\operatorname{Mean}(\overline{\mathrm{x}})=\mathrm{A}+\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}}{\mathrm{N}} \cdot \mathrm{h}=130+\left(\frac{-47}{100}\right) \cdot 10=130-4.7=125.3$
$\therefore$ Mean Deviation about Mean $=\frac{\sum_{i=1}^{6} \mathrm{f}_{\mathrm{i}}\left|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right|}{\mathrm{N}}=\frac{1128.8}{100}=11.29$.

## 3. Find the variance for the discrete data given below.

i) $6,7,10,12,13,4,8,12$
ii) $\mathbf{3 5 0}, \mathbf{3 6 1}, \mathbf{3 7 0}, \mathbf{3 7 3}, \mathbf{3 7 6}, \mathbf{3 7 9}, 38,387,394,395$

Sol.i) Mean $\overline{\mathrm{x}}=\frac{6+7+10+12+13+4+8+12}{8}=\frac{72}{8}=9$

| $x_{i}$ | $x_{i}-\bar{x}$ | $\left(x_{i}-\bar{x}\right)^{2}$ |
| :---: | :---: | :---: |
| 6 | -3 | 9 |
| 7 | -2 | 4 |
| 10 | 1 | 1 |
| 12 | 3 | 9 |
| 13 | 4 | 16 |
| 4 | -5 | 25 |
| 8 | -1 | 1 |
| 12 | 3 | $5\left\|x_{i}-\bar{x}\right\|^{2}=74$ |

Variance $\left(\sigma^{2}\right)=\frac{\sum_{i=1}^{8}\left(x_{i}-\bar{x}\right)^{2}}{n}=\frac{74}{8}=9.25$.
ii) $350,361,370,373,376,379,38,387,394,395$

| $x_{i}$ | $x_{i}-\bar{x}$ | $\left(x_{i}-\bar{x}\right)^{2}$ |
| :---: | :---: | :---: |
| 350 | -27 | 729 |
| 361 | -16 | 256 |
| 370 | -7 | 49 |
| 373 | -4 | 16 |
| 376 | -1 | 1 |
| 379 | 2 | 4 |
| 385 | 8 | 100 |
| 387 | 10 | 289 |
| 394 | 17 | 324 |
| 395 | 18 | 1832 |

1832

Mean $(\bar{x})=\frac{350+361+370+373+376+379+385+387+394+395}{10}=\frac{3770}{10}=377$
Variance $\left(\sigma^{2}\right)=\frac{\sum_{i=1}^{10}\left(x_{i}-\bar{x}\right)^{2}}{n}=\frac{1832}{10}=183.2$.
4. Find the variance and standard deviation of the following frequency distribution.

| $x_{i}$ | 6 | 10 | 14 | 18 | 24 | 28 | 30 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $f_{i}$ | 2 | 4 | 7 | 12 | 8 | 4 | 3 |

Sol.

| $x_{i}$ | $f_{i}$ | $f_{i} x_{i}$ | $\left(x_{i}-\overline{\mathbf{x}}\right)$ | $\left(x_{i}-\overline{\mathbf{x}}\right)^{2}$ | $\mathrm{f}_{\mathrm{i}}\left(\mathrm{x}_{\mathrm{i}}-\overline{\mathbf{x}}\right)^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | 2 | 12 | -13 | 169 | 338 |
| 10 | 4 | 40 | -9 | 81 | 324 |
| 14 | 7 | 98 | -5 | 25 | 175 |
| 18 | 12 | 216 | -1 | 1 | 12 |
| 24 | 8 | 192 | 5 | 25 | 200 |
| 28 | 4 | 112 | 9 | 81 | 324 |
| 30 | 3 | 90 | 11 | 121 | 363 |

$\operatorname{Mean}(\overline{\mathrm{x}})=\frac{760}{40}=19$
Variance $\left(\sigma^{2}\right)=\frac{\Sigma \mathrm{f}_{\mathrm{i}}\left(\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right)^{2}}{\mathrm{~N}}=\frac{1736}{40}=43.4$
Standard deviation $(\sigma)=\sqrt{43.4}=6.59$.
5. Find the mean deviation from the mean of the following data, using the step deviation method.

| Marks | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ | $60-70$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No.of students | 6 | 5 | 8 | 15 | 7 | 6 | 3 |

Sol.To find the required statistic, we shall construct the following table.

| Class <br> interval | Midpoint $x_{i}$ | $f_{i}$ | $d_{i}=\left(x_{i}-\right.$ <br> $35) / 10$ | $f_{i} d_{i}$ | $\mid \mathbf{x}_{i^{\prime}}-$ median $\mid$ | $f_{i} \mid x_{i^{-}}$ <br> median |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $0-10$ | 5 | 6 | -3 | -18 | 28.4 | 170.4 |
| $10-20$ | 15 | 5 | -2 | -10 | 18.4 | 92 |
| $20-30$ | 25 | 8 | -1 | -8 | 8.4 | 67.2 |
| $30-40$ | 35 | 15 | 0 | 0 | 1.6 | 24 |
| $40-50$ | 45 | 7 | 1 | 7 | 11.6 | 81.2 |
| $50-60$ | 55 | 6 | 2 | 12 | 21.6 | 129.6 |
| $60-70$ | 65 | 3 | 3 | 9 | 31.6 | 94.8 |

Here $N=5, \operatorname{Mean}(\bar{x})=A+\frac{h\left(\Sigma f_{i} d_{i}\right)}{N}$

$$
=35+\frac{10(-8)}{50}=33.4 \mathrm{marks}
$$

Mean Deviation from mean $=\frac{1}{\mathrm{~N}} \Sigma \mathrm{f}_{\mathrm{i}}\left|\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}_{\mathrm{i}}\right|=\frac{1}{50}(659.2)=13.18$ (nearly)

## Long Answer Questions

1. Find the mean and variance using the step deviation method of the following tabular data, giving the age distribution of $\mathbf{5 4 2}$ members.

| Age in years $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ | $80-90$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No.of members <br> $\left(\mathbf{f}_{\mathrm{i}}\right)$ | 3 | 61 | 132 | 153 | 140 | 51 | 2 |

Sol.

| Age in years C.I. | Mid point $\left(\mathbf{x}_{\mathbf{i}}\right)$ | ( $\mathbf{f}_{\mathrm{i}}$ ) | $\mathrm{d}_{\mathrm{i}}=\frac{\mathrm{x}_{\mathrm{i}}-\mathrm{A}}{\mathrm{C}}$ $\mathrm{A}=55, \mathrm{C}=$ $10$ | $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}$ | $\mathrm{d}_{\mathrm{i}}{ }^{2}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}{ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20-30 | 25 | 3 | -3 | -9 | 9 | 27 |
| 30-40 | 35 | 61 | -2 | -122 | 4 | 244 |
| 40-50 | 45 | 132 | -1 | -132 | 1 | 132 |
| 50-60 | $55 \rightarrow \mathrm{~A}$ | 153 | 0 | 0 | 0 | 0 |
| 60-70 | 65 | 140 | 1 | 140 | 1 | 140 |
| 70-80 | - 75 | 51 | 2 | 102 | 4 | 204 |
| 80-90 | 85 | 2 | 3 | 6 | 9 | 18 |
|  | $\mathrm{N}=542$ |  |  | -15 | 28 | 765 |

Mean $(\overline{\mathrm{x}})=\mathrm{A}+\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}}{\mathrm{N}} \times \mathrm{C}=55+\frac{-15}{542} \times 10=55-0.277=54.723$
Variance $(\mu)=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}^{2}}{\mathrm{~N}}-\left(\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}}{\mathrm{N}}\right)^{2}=\frac{765}{542}-\left(\frac{-15}{542}\right)^{2}=\frac{765}{542}-\frac{225}{(542)^{2}}$

$$
=\frac{542 \times 765-225}{(542)^{2}}=\frac{414630-225}{293764}=\frac{414405}{293764}=1.4106
$$

$\mathrm{V}(\mu)=\mathrm{V}\left(\frac{\mathrm{X}-\mathrm{A}}{\mathrm{C}}\right)=\left(\frac{1}{\mathrm{C}}\right)^{2} \cdot \mathrm{~V}(\mathrm{X}) \quad\left[\because \mathrm{V}(\mathrm{ax}+\mathrm{n})=\mathrm{a}^{2} \cdot \mathrm{~V}(\mathrm{x})\right]$
$V(X)=C^{2} \cdot V(\mu)=100 \times 1.4106=141.06$.
2. The coefficient of variation of two distributions are 60 and 70 and their standard deviations are 21 and 16 respectively. Find their arithmetic means.

Sol.Coefficient of variation (C.V) $=\frac{\sigma}{\overline{\mathrm{x}}} \times 100$
i) $60=\frac{21}{\overline{\mathrm{x}}} \times 100 \Rightarrow \overline{\mathrm{x}}=35$
ii) $70=\frac{16}{\overline{\mathrm{y}}} \times 100 \Rightarrow \overline{\mathrm{y}}=22.85$
3. From the prices of shares $X$ and $Y$ given below, for 10 days of trading, find out which share is more stable?

| $\mathbf{X}$ | 35 | 54 | 52 | 53 | 56 | 58 | 52 | 50 | 51 | 49 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{Y}$ | 108 | 107 | 105 | 105 | 106 | 107 | 104 | 103 | 104 | 101 |

Sol. Variance is independent of charge of origin.

| $\mathbf{X}$ | $\mathbf{Y}$ | $\mathbf{X}_{\mathrm{i}}{ }^{2}$ | $\mathbf{Y}_{\mathrm{i}}{ }^{2}$ |
| :---: | :---: | :---: | :---: |
| -15 | 8 | 225 | 64 |
| 4 | 7 | 16 | 49 |
| 2 | 5 | 4 | 25 |
| 3 | 5 | 9 | 25 |
| 6 | 6 | 36 | 36 |
| 8 | 7 | 64 | 49 |
| 2 | 4 | 4 | 16 |

| 0 | 3 | 0 | 9 |
| :---: | :---: | :---: | :---: |
| 1 | 4 | 1 | 16 |
| -1 | 1 | 1 | 1 |
| $\Sigma \mathrm{X}_{\mathrm{i}}=10$ | $\Sigma \mathrm{Y}_{\mathrm{i}}=50$ | $\Sigma \mathrm{X}_{\mathrm{i}}^{2}=360$ | $\Sigma \mathrm{Y}_{\mathrm{i}}^{2}=290$ |

$\mathrm{V}(\mathrm{X})=\frac{\Sigma \mathrm{X}_{\mathrm{i}}^{2}}{\mathrm{n}}-(\overline{\mathrm{X}})^{2}=\frac{360}{10}-\left(\frac{10}{10}\right)^{2}=36-1=35$
$\mathrm{V}(\mathrm{Y})=\frac{\Sigma \mathrm{Y}_{\mathrm{i}}^{2}}{\mathrm{n}}-(\overline{\mathrm{Y}})^{2}=\frac{290}{10}-\left(\frac{50}{10}\right)^{2}=29-25=4$
Y is stable.
4. The mean of 5 observations is 4.4. Their variance is 8.24 . If three of the observations are 1 , 2 and 6. Find the other two observations.

## Sol.

| $x_{i}$ | $x_{i}{ }^{2}$ |
| :---: | :---: |
| 1 | 1 |
| 2 | 4 |
| 6 | 36 |
| $x$ | $x^{2}$ |
| $y$ | $y^{2}$ |

S.D. $=\sqrt{\frac{\Sigma \mathrm{m}^{2}}{\mathrm{n}}-(\overline{\mathrm{x}})^{2}}$
$\overline{\mathrm{x}}=4.4$
$\Rightarrow 4.4=\frac{1+2+6+x+y}{5}$
$\Rightarrow 9+\mathrm{x}+\mathrm{y}=22$
$\Rightarrow \mathrm{x}+\mathrm{y}=13$
S.D. ${ }^{2}=\frac{1+4+3+\mathrm{x}^{2}+\mathrm{y}^{2}}{5}-(4.4)^{2}=\frac{41+\mathrm{x}^{2}+\mathrm{y}^{2}}{5}-19.36$
S.D. ${ }^{2}=$ Variance

Variance $=\frac{41+\mathrm{x}^{2}+\mathrm{y}^{2}}{5}-19.36$
$8.24+19.36=\frac{41+\mathrm{x}^{2}+\mathrm{y}^{2}}{5}$
$41+x^{2}+y^{2}=5 \times 27.6$
$x^{2}+y^{2}=138-41$
$x^{2}+y^{2}=97$
From (1) and (2),

$$
\begin{aligned}
& x^{2}+(13-x)^{2}=97 \\
& x^{2}+169+x^{2}-26 x=97 \\
& 2 x^{2}-26 x+72=0 \\
& x^{2}-13 x+36=0 \\
& x-9 x-4 x+36=0 \\
& x(x-9)-4(x-9)=0 \\
& (x-9)(x-4)=0 \\
& x=4,9
\end{aligned}
$$

Put $x=4$ in (1)

$$
y=13-4=9
$$

Put $\mathrm{x}=9$ in (1)

$$
y=13-9=4
$$

$\therefore$ If $\mathrm{x}=4$, then $\mathrm{y}=9$.
If $\mathrm{x}=9$ then $\mathrm{y}=4$.
5. The arithmetic mean and standard deviation of a set of 9 items are 43 and 5 respectively. If an item of value 63 is added to that set, find the new mean and standard deviation of 10 item set given.

Sol. $\bar{X}=\frac{\sum_{i=1}^{9} x_{i}}{n}$
$43=\frac{\sum_{i=1}^{9} \mathrm{x}_{\mathrm{i}}}{9}$
$\sum_{i=1}^{9} x_{i}=43 \times 9=387$
New Mean $=\frac{\sum_{i=1}^{10} x_{i}}{n}=\frac{\sum_{i=1}^{9} x_{i}+x_{10}}{10}=\frac{387+63}{10}=45$
S. $D^{2}=\frac{\sum_{i=1}^{9} x_{i}{ }^{2}}{9}-(\bar{x})^{2} \Rightarrow 5^{2}=\frac{\sum_{i=1}^{9} x_{i}{ }^{2}}{9}-(43)^{2}$
$\frac{\sum_{i=1}^{9} x_{i}{ }^{2}}{9}=25+1849 \Rightarrow \frac{\sum_{i=1}^{9} x_{i}{ }^{2}}{9}=1874$
$\sum_{i=1}^{9} x_{i}{ }^{2}=1874 \times 9=16866$
$\sum_{\mathrm{i}=1}^{10} \mathrm{x}_{\mathrm{i}}^{2}=\sum_{\mathrm{i}=1}^{9} \mathrm{x}_{\mathrm{i}}{ }^{2}+\mathrm{x}_{10}^{2}=16866+3969=20835$
New S.D. $=\sqrt{\frac{\sum_{i=1}^{10} x_{i}{ }^{2}}{10}-(\bar{x})^{2}}=\sqrt{\frac{20835}{10}-(45)^{2}}$

$$
=\sqrt{2083.5-2025}=\sqrt{58.5}=7.6485 .
$$

6. The following table gives the daily wages of workers in a factor. Compute the standard deviation and the coefficient of variation of the wages of the workers.

| Wages (Rs.) | $125-$ <br> 175 | $175-$ <br> 225 | $225-$ <br> 275 | $275-$ <br> 325 | $325-$ <br> 375 | $375-$ <br> 425 | $425-$ <br> 475 | $475-$ <br> 525 | $525-$ <br> 575 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> workers | 2 | 22 | 19 | 14 | 3 | 4 | 6 | 1 | 1 |

Sol.We shall solve this problem using the step deviation method, since the mid points of the class intervals are numerically large.

Here $\mathrm{h}=50$. Take $\mathrm{a}=300$. Then $\mathrm{y}_{\mathrm{i}}=\frac{\mathrm{x}_{\mathrm{i}}-300}{50}$

| Midpoint $\mathrm{x}_{\mathrm{i}}$ | Frequency $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{y}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}{ }^{2}$ |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 150 | 2 | -3 | -6 | 18 |  |  |  |  |  |
| 200 | 22 | -2 | -44 | 88 |  |  |  |  |  |
| 250 | 19 | -1 | -19 | 19 |  |  |  |  |  |
| 300 | 14 | 0 | 0 | 0 |  |  |  |  |  |
| 350 | 3 | 1 | 3 | 3 |  |  |  |  |  |
| 400 | 4 | 2 | 8 | 16 |  |  |  |  |  |
| 450 | 6 | 3 | 18 | 54 |  |  |  |  |  |
| 500 | 1 | 4 | 4 | 16 |  |  |  |  |  |
| 550 | 1 | 5 | 5 | 25 |  |  |  |  |  |
|  |  |  |  |  |  | $\mathrm{~N}=72$ |  | $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}=-31$ | $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}{ }^{2}=239$ |

Mean $\overline{\mathrm{x}}=\mathrm{A}+\left(\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}}{\mathrm{M}}\right) \times \mathrm{h}=300+\left(\frac{-31}{72}\right) 50=300-\frac{1550}{72}=278.47$
Variance $\left(\sigma_{x}^{2}\right)=\frac{h^{2}}{N^{2}}\left[N \Sigma f_{i} y_{i}^{2}-\left(\Sigma f_{i} y_{i}\right)^{2}\right]$

$$
=\frac{2500}{72 \times 72}[72(239)-(31 \times 31)]
$$

$$
\sigma_{x}=\sqrt{2500\left(\frac{239}{72}-\frac{961}{72 \times 72}\right)}=88.52
$$

Coefficient of variation $=\frac{88.52}{278.47} \times 100=31.79$.
7. An analysis of monthly wages paid to the workers of two firms $A$ and $B$ belonging to the same industry gives the following data.

|  | Firm A | Firm B |
| :--- | :---: | :---: |
| Number of workers | 500 | 600 |
| Average daily wage (Rs.) | 186 | 175 |
| Variance of distribution of waves | 81 | 100 |

(i) Which firm A or B , has greater variability in individual wages?
(ii) Which firm has larger wage bill?

Sol. (i) Since variance of distribution of wages in firm A is $81, \sigma_{1}^{2}=81$ and hence $\sigma_{1}=9$.
Since variance of distribution of wages in firm B is $100, \sigma_{2}^{2}=100$ and hence $\sigma_{2}=10$.
$\therefore$ C.V. of distribution of wages of firm $A=\frac{\sigma_{1}}{\mathrm{x}_{1}} \times 100=\frac{9}{186} \times 100=4.84$
C.V. of distribution of wages of firm $B=\frac{\sigma_{2}}{x_{2}} \times 100=\frac{10}{175} \times 100=5.71$

Since C.V. of firm B is greater than C.V. of firm A, we can say that firm B has greater variability in individual wages.
(ii) Firm A has number of workers i.e., wage earners $\left(n_{1}\right)=500$.

Its average daily wage, say $\overline{\mathrm{x}}_{1}=$ Rs. 186
Since Average daily wage $=\frac{\text { Total wages paid }}{\text { No.of workers }}$, if follows that total wages paid to the workers

$$
=\mathrm{n}_{1} \overline{\mathrm{x}}_{1}=500 \times 186=\text { Rs. } 93,000
$$

Firm B has number of wage earners $\left(\mathrm{n}_{2}\right)=600$

Average daily wage, say $\bar{x}_{2}=$ Rs. 175
Total daily wages paid to the workers $=n_{2} \overline{\mathrm{x}}_{2}=600 \times 175=$ Rs. $1,05,000$.
Hence we see that firm B has larger wage bill.
8. The variance of $\mathbf{2 0}$ observations is 5 . If each of the observations is multiplied by 2 , find the variance of the resulting observations.

Sol. Let the given observations be $\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{20}$ and $\overline{\mathrm{x}}$ be their mean.
Given that $\mathrm{n}=20$ and variance $=5$

$$
\begin{equation*}
\text { i.e., } \frac{1}{20} \sum_{i=1}^{20}\left(x_{i}-\bar{x}\right)^{2}=5 \text { or } \sum_{i=1}^{20}\left(x_{i}-\bar{x}\right)^{2}=100 \tag{1}
\end{equation*}
$$

If each observation is multiplied by 2 , then the new observations are

$$
y_{i}=2 x_{i}, i=1,2, \ldots, 20 \text { or } x_{i}=y_{i} / 2
$$

Therefore $\overline{\mathrm{y}}=\frac{1}{20} \sum_{\mathrm{i}=1}^{20} \mathrm{y}_{\mathrm{i}}=\frac{1}{20} \sum_{\mathrm{i}=1}^{20} 2 \mathrm{x}_{\mathrm{i}}=2 \cdot \frac{1}{20} \sum_{\mathrm{i}=1}^{20} \mathrm{x}_{\mathrm{i}}=2 \overline{\mathrm{x}}$ or $\overline{\mathrm{x}}=\frac{1}{2} \overline{\mathrm{y}}$
Substituting the values of $x_{i}$ and $\bar{x}$ in (1) we get

$$
\sum_{i=1}^{20}\left(\frac{1}{2} y_{i}-\frac{1}{2} \bar{y}\right)^{2}=100 \text { i.e., } \sum_{i=1}^{20}\left(y_{i}-\bar{y}\right)^{2}=400
$$

Then the variance of the resulting observations $=\frac{1}{20} \times 400=20=2^{2} \times 5$.
Note: From this example we note that, if each observation in a data is multiplied by a constant k , then the variance of the resulting observations is $\mathrm{k}^{2}$ time that of the variance of original observations.
9. If each of the observations $x_{1}, x_{2}, \ldots, x_{n}$ is increased by $k$, where $k$ is a positive or negative number, then show that the variance remains unchanged.

Sol. Let $\bar{x}$ be the mean of $x_{1}, x_{2}, \ldots, x_{n}$
Then their variance is given by $\sigma_{1}^{2}=\frac{1}{n} \sum_{\mathrm{i}=1}^{\mathrm{n}}\left(\mathrm{x}_{\mathrm{i}}-\overline{\mathrm{x}}\right)^{2}$.
If to each observation we add a constant $k$, then the new (changed) observations will be

$$
\begin{equation*}
y_{i}=x_{i}+k \tag{1}
\end{equation*}
$$

Then the mean of the new observations $\bar{y}=\frac{1}{n} \sum_{i=1}^{n} y_{i}$

$$
\begin{aligned}
& =\frac{1}{n} \sum_{\mathrm{i}=1}^{\mathrm{n}}\left(\mathrm{x}_{\mathrm{i}}+\mathrm{k}\right)=\frac{1}{\mathrm{n}}\left[\sum_{\mathrm{i}=1}^{\mathrm{n}} \mathrm{x}_{\mathrm{i}}+\sum_{\mathrm{i}=1}^{\mathrm{n}} \mathrm{k}\right] \\
& =\frac{1}{\mathrm{n}} \sum_{\mathrm{i}=1}^{\mathrm{n}} \mathrm{x}_{\mathrm{i}}+\frac{1}{\mathrm{n}}(\mathrm{nk})=\overline{\mathrm{x}}+\mathrm{k} \quad \ldots(2
\end{aligned}
$$

The variance of the new observations $=\sigma_{2}^{2}=\frac{1}{n} \sum_{i=1}^{n}\left(y_{i}-\bar{y}\right)^{2}$

$$
\begin{aligned}
& =\frac{1}{n} \sum_{i=1}^{n}\left(x_{i}+k-\bar{x}-k\right)^{2}, \text { using (1) and (2) } \\
& =\frac{1}{n}\left(x_{i}-\bar{x}\right)^{2}=\sigma_{1}^{2}
\end{aligned}
$$

Thus the variance of the new observations is the same as that of the original observations.
Note: We note that adding (or subtracting) a positive number to (or form) each of the given set of observations does not affect the variance.
10. The scores of two cricketers $A$ and $B$ in 10 innings are given below. Find who is a better run getter and who is a more consistent player.

| Scores of A : $\mathrm{x}_{\mathrm{i}}$ | 40 | 25 | 19 | 80 | 38 | 8 | 67 | 121 | 66 | 76 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Scores of B : $\mathrm{y}_{\mathrm{i}}$ | 28 | 70 | 31 | 0 | 14 | 111 | 66 | 31 | 25 | 4 |

Sol. For cricketer A: $\overline{\mathrm{x}}=\frac{540}{10}=54$
For cricketer B: $\bar{y}=\frac{380}{10}=38$

| $x_{i}$ | $\left(x_{i}-\right.$ median $)$ | $\left(x_{i}-\text { median }\right)^{2}$ | $y_{i}$ | $\left(y_{i}-y\right.$ median $)$ | $\left(y_{i}-y \text { median }\right)^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | -14 | 196 | 28 | -10 | 100 |
| 25 | 29 | 841 | 70 | 32 | 1024 |
| 19 | -35 | 1225 | 31 | -7 | 49 |
| 80 | 26 | 676 | 0 | -38 | 1444 |
| 38 | -16 | 256 | 14 | -24 | 576 |
| 8 | -46 | 2116 | 111 | 73 | 5329 |
| 67 | 13 | 169 | 66 | 28 | 784 |
| 121 | 67 | 4489 | 31 | -7 | 49 |
| 66 | 12 | 144 | 25 | -13 | 169 |
| 76 | 22 | 484 | 4 | -34 | 1156 |
| $5 x_{i}=540$ |  | 10596 | $\Sigma y_{i}=380$ |  | 10680 |
|  |  |  |  |  |  |

Standard deviation of scores of $A=\sigma_{x}=\sqrt{\frac{1}{n} \Sigma\left(x_{i}-\bar{x}\right)^{2}}=\sqrt{\frac{10596}{10}}=\sqrt{1059.6}=32.55$
Standard deviation of scores of $B=\sigma_{y}=\sqrt{\frac{1}{n} \Sigma\left(y_{i}-\bar{y}\right)^{2}}=\sqrt{\frac{10680}{10}}=\sqrt{1068}=32.68$
C.V. of $A=\frac{\sigma_{x}}{\bar{x}} \times 100=\frac{32.55}{54} \times 100=60.28$
C.V. of $B=\frac{\sigma_{y}}{\bar{y}} \times 100=\frac{32.68}{38} \times 100=86$

Since $\bar{x}>\bar{y}$, cricketer A is a better run getter (scorer).
Since C.V. of A $<$ C.V. of B, cricketer A is also a more consistent player.
