

Circular Motion

2011

1. A particle moves in a circle of radius 5 cm with constant speed and time period 0.2π s. The acceleration of the particle is
 - a) $25 m/s^2$
 - b) $36 m/s^2$
 - c) $5 m/s^2$
 - d) $15 m/s^2$
2. A particle of mass m is released from rest and follows a parabolic path as shown. Assuming that the displacement of the mass from the origin is small, which graph correctly depicts the position of the particle as a function of time?

4. A ball of mass 0.12kg is being whirled in a horizontal circle at the end of string 0.5m long. It is capable of making 231 revolutions in one minute. The breaking tension of the string is
 - a) 3 N
 - b) 15.1N
 - c) 31.5N
 - d) 35.1N
6. The motor of an angle is rotating about its axis with an angular velocity of 100 rev/m. It comes to rest in 15s, after being switched off. Assuming constant angular deceleration. What are the numbers of revolutions made by it before coming to rest?

- a) 12.5 b) 40 c) 32.6 d) 15.6

7. A stone of mass m is tied to a string and is moved in a vertical circle of radius r making n rev/min. The total tension in the string when the stone is at the lowest point is

- a) mg b) $m(g + \pi nr^2)$ c) $m(g + nr)$ d) $m\left\{g + \frac{\pi^2 n^2 r}{900}\right\}$

6. A string is wound round the rim of a mounted flywheel of mass 20kg and radius 20cm. A steady pull of 25N is applied on the cord. Neglecting friction and mass of the string, the angular acceleration of the wheel is

- a) $50s^{-2}$ b) $25s^{-2}$ c) $12.5s^{-2}$ d) $6.25s^{-2}$

7. A wheel is rotating at 900 rpm about its axis. When the power is cut off it comes to rest in 1min. The angular retardation in rad / s^2 is

- a) $\frac{\pi}{2}$ b) $\frac{\pi}{4}$ c) $\frac{\pi}{6}$ d) $\frac{\pi}{8}$

8. A car is moving in a circular horizontal track of radius 10.0 m with a constant speed of $10.0ms^{-1}$. A plumb bob is suspended from the roof of the car by a light rigid rod of length 1.00 m. The angle made by the rod with the track is ($g = 10ms^{-2}$)

- a) Zero b) 30° c) 45° d) 60°

2008

9. A roller coaster is designed such that riders experience 'weightlessness' as they go round the top of a hill whose radius of curvature is 20m. The speed of the car at the top of the hill is between

- a) $14ms^{-1}$ and $15ms^{-1}$ b) $15ms^{-1}$ and $16ms^{-1}$
 c) $16ms^{-1}$ and $17ms^{-1}$ d) $13ms^{-1}$ and $14ms^{-1}$

10. Assertion: A body of mass 1kg is making 1rps in a circle of radius 1m. Centrifugal force acting on it is $4\pi^2 N$.

Reason: Centrifugal force is given by $F = \frac{mv^2}{r}$

- a) Both assertion and reason are true and reason is the correct explanation of assertion.
- b) Both assertion and reason are true but reason is not the correct explanation of assertion.
- c) Assertion is true but reason is false.
- d) Both assertion and reason are false.

11. A particle is moving along a circular path of radius 4m with a uniform speed $5ms^{-1}$. What will be the average acceleration when the particle completes half revolution?

- a) Zero
- b) $10ms^{-2}$
- c) $10\pi ms^{-2}$
- d) $\frac{10}{\pi}ms^{-2}$

12. A car of mass m moves in a horizontal circular path of radius r m. at an instant its speed is vms^{-1} and is increasing at a rate of ams^{-2} . Then the acceleration of the car is

- a) $\frac{v^2}{r}$
- b) a
- c) $\sqrt{a^2 + \left(\frac{v^2}{r}\right)^2}$
- d) $\sqrt{u + \frac{v^2}{r}}$

13. A body of mass 1kg is rotating in a vertical circle of radius 1m. What will be the difference in its kinetic energy at the top and bottom of the circle (take $g = 10ms^{-2}$)

- a) 10 J
- b) 20 J
- c) 30 J
- d) 50 J

14. A particle moves through angular displacement θ on a circular path of radius r. The linear displacement will be

- a) $2r \sin(\theta/2)$
- b) $2r \cos(\theta/2)$
- c) $2r \tan(\theta/2)$
- d) $2r \cot(\theta/2)$

2006

15. A body moves along a circular path of radius 10m and the coefficient of friction is 0.5. What should be its angular speed in $rads^{-1}$ if it is not to slip from the surface?

($g = 9.8ms^{-2}$)

- a) 5
- b) 10
- c) 0.1
- d) 0.7

16. One end of a string of length l is connected to a particle of mass m and the other to a small peg on a smooth horizontal table. If the particle moves in a circle with speed v , the net force on the particle (directed towards the centre) is

- a) T b) $T - \frac{mv^2}{l}$ c) $T + \frac{mv^2}{l}$ d) Zero

17. If a_r and a_t represent radial and tangential accelerations, the motion of a particle will be uniformly circular if

- a) $a_r = 0$ and $a_t = 0$ b) $a_r = 0$ but $a_t \neq 0$ c) $a_r \neq 0$ but $a_t = 0$ d) $a_r \neq 0$ and $a_t \neq 0$

2005

18. A stone tied to the end of a string of 1m long is whirled in a horizontal circle with a constant speed. If the stone makes 22 revolutions in 44s, what is the magnitude and direction of acceleration the centre?

- a) $\frac{\pi^2}{4}ms^{-2}$ and direction along the radius towards the centre
b) π^2ms^{-2} and direction along the radius towards from centre
c) π^2ms^{-2} and direction along the radius towards the centre
d) π^2ms^{-2} and direction along the tangent to the circle

19. What determines the nature of the path followed by the particle?

- a) Speed b) Velocity c) Acceleration d) Both b and c

20. A ball of mass 0.25kg attached to the ends of a string of length 1.96m is rotating in a horizontal circle. The string will break, if tension is more than 25N. What is the maximum velocity with which the ball can be rotated?

- a) $3ms^{-1}$ b) $5ms^{-1}$ c) $9ms^{-1}$ d) $14ms^{-1}$

21. When a body moves with constant speed in a circular path, then

- a) Work done will be zero b) Acceleration will be zero
c) No force acts on the body d) Its velocity remains constant

22. A stone of mass m tied to a string of length l is rotated a circle with the other end of the string as the centre. The speed of the stone is v . If the string breaks, the stone will
- a) Move towards the centre b) Move away from the centre
c) Move along tangent d) Stop

2004

23. The direction of the angular velocity vector is along
- a) The tangent to the circular path b) The inward radius
c) The outward radius d) The axis of rotation
24. In an orbital motion, the angular momentum vector is
- a) Along the radius vector b) Parallel to the linear momentum
c) In the orbital plane d) Perpendicular to the orbital plane.

2003

25. A particle moves along a circle of radius $\left(\frac{20}{\pi}\right)m$ with constant tangential acceleration. If the velocity of the particle is $80ms^{-1}$ at the end of the second revolution after motion has begun, the tangential acceleration is
- a) $160\pi ms^{-2}$ b) $40ms^{-2}$ c) $40\pi ms^{-2}$ d) $640\pi ms^{-2}$
26. Force responsible for the circular motion of the body is
- a) Centripetal Force b) Centrifugal Force c) Gravitational Force d) None of these
27. A cyclist moving at a speed of $20ms^{-1}$ takes a turn, if he doubles his speed then chance of overturn
- a) Is doubled b) Is halved c) Becomes four times d) Becomes $\frac{1}{4}$ times
28. A particle originally at rest at the highest point of a smooth circle in a vertical plane, is gently pushed and starts sliding along the circle in a vertical plane, is gently pushed and starts sliding along the circle. It will leave the circle at a vertical distance h below the highest point such that

a) $h = 2R$

b) $h = \frac{R}{2}$

c) $h = R$

d) $h = \frac{R}{3}$

Hints

1. $r = 5\text{cm} = 5 \times 10^{-2} \text{m}$ and $T = 0.2\pi \text{s}$

$$a = r\omega^2 = \frac{4\pi^2}{T^2} r = \frac{4 \times \pi^2 \times 5 \times 10^{-2}}{(0.2\pi)^2} = 5 \text{ms}^{-2}$$

2. Concept

3. $F = \frac{mv^2}{r}$

Where, m is mass, v the velocity and r the radius

Since, $v = r\omega$

$$F = mr\omega^2$$

But, $m = 0.1\text{kg}$, $r = 0.5\text{m}$,

$$\omega = 231\text{rpm} = \frac{2\pi \times 231}{60} \text{rad s}^{-1} = 24.2 \text{ rad/s}$$

$$\therefore F = 0.12 \times 0.5 \times (24.2)^2 = 35.1\text{N}$$

4. $0 = \omega_0 - \alpha t$

$$\alpha = \frac{\omega_0}{t} = \frac{(100 \times 2\pi) / 60}{15} = 0.6 \text{ rad / s}^2$$

Now, $\theta = \frac{\omega_0^2}{2\alpha}$

$$\text{Or } \theta = \frac{\left(\frac{100 \times 2\pi}{60}\right)^2}{2 \times 0.7} = 78.25 \text{ rad}$$

Number of rotations

$$n = \frac{\theta}{2\pi} = 12.5$$

5. $T_{net} = \frac{mv^2}{r} + mg = mr\omega^2 + mg = mg \left(\frac{2\pi n}{60}\right)^2 + mg = m \left[\frac{\pi^2 n^2 r}{900} + g\right]$

6. $m = 20\text{kg}$

$$R = 20\text{cm} = \frac{1}{5}$$

$$\text{But, } I = \frac{1}{2} MR^2 = \frac{1}{2} \times 20 \times \frac{1}{5}$$

$$I = 0.4\text{kg} \cdot \text{m}^2$$

$$\text{Angular acceleration } \alpha = \frac{\tau}{I} = \frac{FR}{I} = \frac{25 \times \frac{1}{5}}{0.4} = 12.5\text{s}^{-2}$$

7. $\omega = \omega_0 + \alpha t$

$$\omega_0 = 900\text{rpm} = \frac{(2\pi \times 900)}{60} \text{ rad / s}$$

$$\omega = 0 \text{ and } t = 60$$

$$0 = \frac{2\pi \times 900}{60} + \alpha \times 60$$

$$\alpha = \frac{2\pi \times 900}{60 \times 60} = \frac{\pi}{2}$$

8. $\tan \theta = \frac{v^2}{rg} \Rightarrow \tan \theta = \frac{(10)^2}{10 \times 10} = 1$

$$\Rightarrow \theta = 45^\circ$$

9. $Mg - N = M \frac{v^2}{R}$

For weightlessness, $N = 0$

$$\therefore \frac{Mv^2}{R} = Mg$$

Where R is the radius of curvature and v is the speed of car

Therefore, $v = \sqrt{Rg}$

But, $R = 20\text{m}$, $g = 10.0\text{ms}^{-2}$

$$v = \sqrt{20 \times 10.0} = 14.14\text{ms}^{-2}$$

10. $F = \frac{mv^2}{r} = \frac{n(r\omega)^2}{r} = mr\omega^2 = mr(2\pi v)^2 = 4\pi^2 mrv^2$

$$F = 4\pi^2 \times 1 \times 1 \times 1^2 = 4\pi^2 N$$

11. Change in velocity

$$\Delta v = [5 - (-5)]\text{ms}^{-1} = 10\text{ms}^{-1}$$

Time taken to complete the half revolution is

$$t = \frac{\pi r}{v} = \frac{\pi \times 5}{5} = \pi \text{second}$$

$$\text{Average acceleration } a_v = \frac{\Delta v}{t} = \frac{10}{\pi} \text{ms}^{-2}$$

12. Radial acceleration $a_r = \frac{v^2}{r}$

Tangential acceleration $a_t = a$

$$\therefore \text{Resultant acceleration } a' = \sqrt{a_r^2 + a_t^2 + 2a_r a_t \cos \theta}$$

$$\text{But } \theta = 90^\circ$$

$$\text{And } a' = \sqrt{a_r^2 + a_t^2} = \sqrt{\left(\frac{v^2}{r}\right)^2 + a^2}$$

13. Difference in kinetic energy $= \frac{1}{2}m[5gr - gr] = 2gmr = 2 \times 10 \times 1 \times 1 = 20\text{J}$

14. $\Delta r = r_2 - r_1$; where $r_2 = r_1 = r$

$$\Delta r = \sqrt{r_2^2 + r_1^2 - 2r_2 r_1 \cos \theta} = 2r \sin \frac{\theta}{2}$$

15. $mr\omega^2 = \mu mg$

Or $r\omega^2 = \mu g$

Or $\omega = \sqrt{\frac{0.5 \times 9.8}{10}} = 0.7 \text{ rad s}^{-1}$

16. Concept

17. a) if $a_r = 0$ and $a_t = 0$ then motion is uniform translatory

b) if $a_r = 0$ but $a_t \neq 0$ then motion is acceleration translatory

c) if $a_r \neq 0$ and $a_t = 0$, then motion is a uniform circular

d) if $a_r \neq 0$ and $a_t \neq 0$ then motion is a non uniform circular

18. $a = r\omega^2 = r \left(\frac{2\pi n}{t}\right)^2 = r \times \frac{4\pi^2 n^2}{t^2} = \frac{1 \times 4 \times \pi^2 \times (22)^2}{(44)^2} = \pi^2 \text{ ms}^{-2}$

This acceleration is directed along radius of circle

19. Concept

20. $F = \frac{mv^2}{r}$

Or $v^2 = \frac{Fr}{m}$

$\therefore v^2 = \frac{25 \times 1.96}{0.25} = 196$

Or $v = \sqrt{196} = 14 \text{ms}^{-1}$

21. Concept

22. Concep

23. Concept

24. Concept

25. The tangential acceleration

$a_T = r\alpha$

But from ,

$\omega^2 = \omega_0^2 + 2\alpha\theta$

$\omega_0 = 0, \omega = \frac{v}{r} = \frac{80}{20/\pi} = 4\pi \text{ rad s}^{-1}$

$\theta = 2 \times 2\pi \text{ rad}$

$\alpha = \frac{\omega^2}{2\theta} = \frac{(4\pi)^2}{2 \times (2 \times 2\pi)} = \frac{16\pi^2}{8\pi} = 2\pi$

$\therefore a_T = r\alpha = \frac{20}{\pi} \times 2\pi = 40 \text{ms}^{-2}$

26. Concept

27. $F = \frac{mv^2}{r}$

$\Rightarrow F \propto v^2$

Hence chance of overturning becomes $\frac{1}{4}$ times

28. From law of conservation of energy,

$\therefore PE = KE$

$mgh = \frac{1}{2}mv^2$

$\Rightarrow v = \sqrt{2gh} \dots\dots\dots (i)$

Also the horizontal component of force is equal centrifugal force

$\therefore mg \cos \theta = \frac{mv^2}{R} \dots\dots\dots (ii)$

From eq (i)

$v = \sqrt{2gh}$

$\therefore mg \cos \theta = \frac{2mgh}{R} \dots\dots\dots (iii)$

From ΔAOB ,

$\cos \theta = \frac{2R-h}{R}$

$\Rightarrow mg \left(\frac{R-h}{R} \right) = \frac{2mgh}{R} \Rightarrow 3h = R$

$\Rightarrow h = \frac{R}{3}$
